

Who is guiding YOUR Internet presence?

Does your web site consistently generate high-quality leads for your firm –within your primary practice area, or is it simply a static online brochure? Is your law firm's online identity seamlessly integrated with your traditional offline marketing or does it lack direction and consistency of message? How many people visit your firm's website each month and of those who do, how many website visitors become clients? What is your average cost of acquisition for each new lead or client? Does your website have a positive ROI and serve as a profit center generating clients and referral business? If you are unable to answer any of these questions or are unhappy with your answers, MarketWorks can help.

While many law firms monitor the visitors to their website, very few are proactive and proficient at generating targeted unique visitor traffic. That's where we come in. MarketWorks is a Web site management and Internet marketing firm specializing in advanced search engine optimization (SEO) and search engine marketing (SEM) services for attorneys. We help our clients develop and implement effective Internet strategies and online marketing programs that deliver measurable results.
