

Verio Linux® Managed Private Server (MPS) from MarketWorks, LLC

Flexible MPS hosting plans

Many IT professionals associate dedicated hosting with management hassles. However, those that rely on Verio Linux® Managed Private Server (MPS) know better. By outsourcing your hosting requirements, you eliminate costly expenditures for administration teams, security, hardware equipment, bandwidth, data backups, and connectivity. Most importantly, you'll have the freedom to focus on your business rather than disk drives, routers, and switches.

Select Linux Managed Private Server.

- » **Serious power** – You'll be equipped with a hardware and software configuration ideally suited to meet the traffic and performance demands of your sites and services.
- » **Complete confidence** – Our team of Internet experts delivers the full slate of system administration and management services, including security, backup, monitoring, and maintenance. Leave the IT to us, so you can stay focused on your customers' needs.
- » **Configuration** – You can skip building it and testing it – and you can't buy this anywhere but Verio. We validate your configuration to ensure optimal reliability and performance from your server.
- » **Multiple IPs** – Verio customers can buy additional IPs for their customers' use.
- » **Growing room** – Verio Linux Managed Private Server accounts offer great flexibility. A tiered solution set allows you to select the plan that best satisfies your budget and requirements. No limits on scalability makes it easy to grow as you go.
- » **Your server is ready** – Once you order the MPS, it is available right away, so there's no more waiting for setup. You'll be ready to "rock and roll" in minutes.

Linux MPS: The right services to meet your needs

- » **Robust Storage** – Linux MPS is based on the Red Hat® Enterprise Linux (RHEL) operating system to deliver the best of open source technology and the stability of a true enterprise-class platform.
- » **Server Monitoring** – Verio actively and continually monitors many aspects of MPS servers, including disk space used, processors, swap, disk IO, bandwidth, and more. We also

oversee all aspects related to the data centers, such as network traffic, hardware failure, etc. Engineers are notified promptly if a problem is discovered. Problems are usually resolved within minutes, and almost always within one hour or less.

- » **Versatile Application Support** – Linux MPS supports a host of mission-critical applications and tools.
- » **Development Tools** – Linux MPS supports thousands of applications and solutions.
- » **Simple Controls** – A Web-based control panel makes account configuration and customization easy.

VerioLinuxMPSprovides the following Managed Services:

- Premier Data Centers in USA
- Ultra-fast and reliable global Tier-1 network
- Hardware maintenance and upgrades on powerful Intel-based servers
